

## Park Road Park Dredging Project

**Community Information Meeting** 

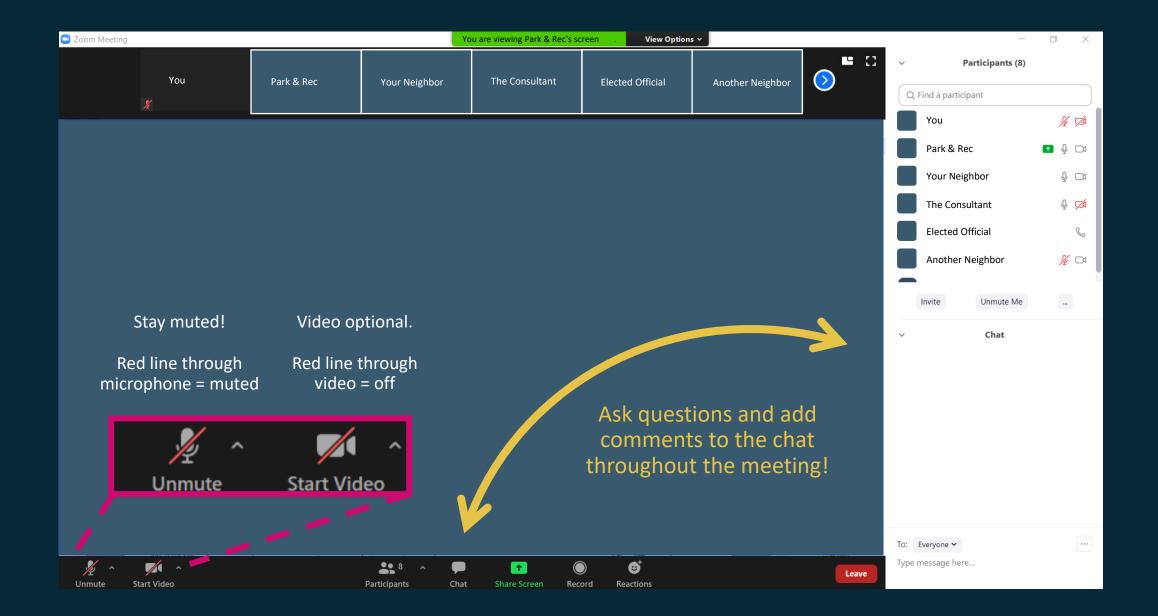

July 11, 2024 Virtual Meeting

### Getting to know Zoom

### Introductions

TO THE LABOR TO THE PARTY OF TH

- Project Owner: Mecklenburg County
  - Asset & Facility Management
  - Parks & Recreation

Bert Lynn, PLA, ASLA, LEED AP

Kevin Brickman, PLA, ASLA

Consultant Team: LJB Engineering

Neal Banerjee, PE, CFM

Amy Black, PE

### Agenda

- Welcome and Introductions
- Background
- Why We're Here
- Project Overview
- Proposed Schedule
- What You Can Expect
- Questions

## Background

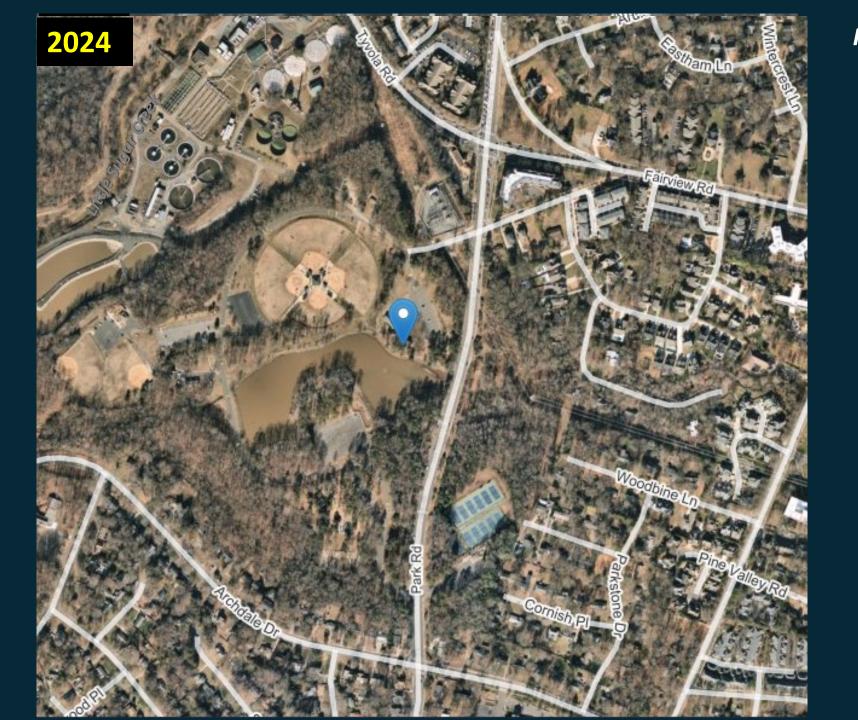

Built in 1971 as central amenity in Park Road
 Park – one of the most heavily utilized parks in the County

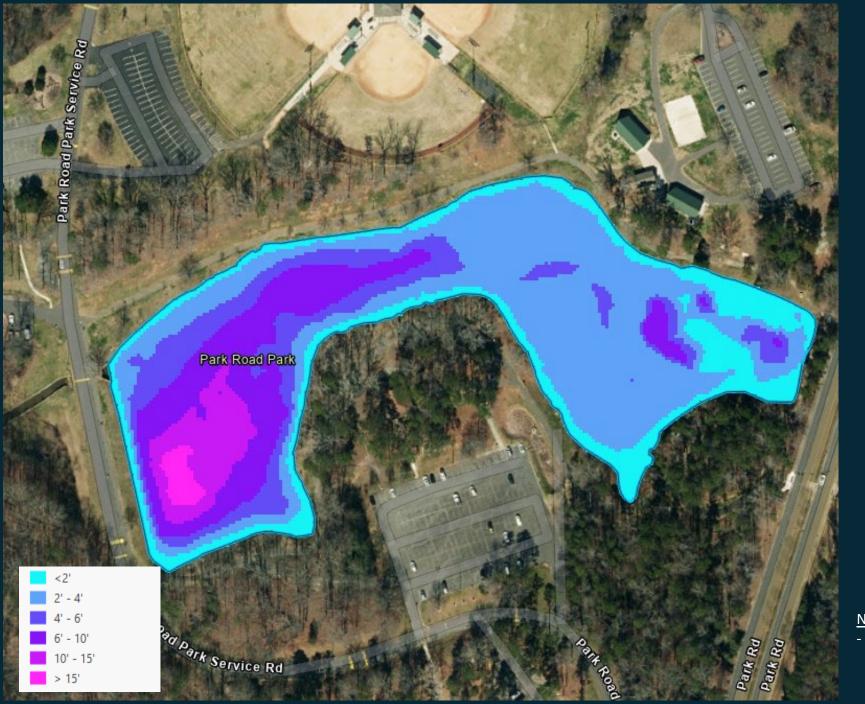

- Pond physical Characteristics
  - 6.7-acre surface area
  - Depths:
    - 2 -4' upper (eastern) portion
    - 7 17' lower (western) portion
  - Dam:
    - 370' long, 25' high earthen dam
    - Classified "low" hazard by Dam Safety
    - Combination riser/barrel and spillway outlet structure with drain

# Park Road Park Through The Years (Animation)

# Park Road Park Existing Water Depth

#### Notes:

Depth based on 2024 bathymetric survey and normal pool elevation of 622'

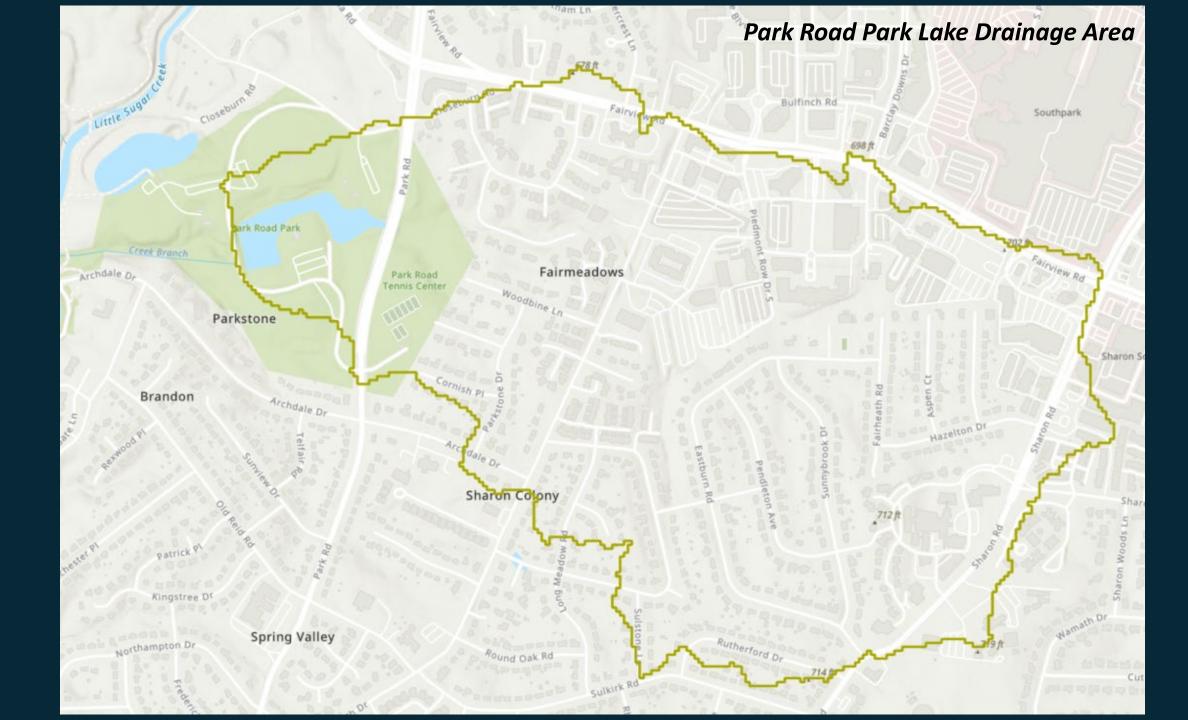

## Background

- Drainage area characteristics
  - 470-ac mature urbanized area east to Fairview and Sharon Rd
  - Largely residential and office/commercial
- Large majority of water enters from stream passing through culvert under Park Rd

 Pond discharges to small receiving stream that outlets into Little Sugar Creek above Archdale Dr.

## Background

 Park has had history of sedimentation and "shallowness" particularly in upper section

- Pond improvement projected completed 2011
  - Pond focus was to address failing riser/barrel and flume on backside of dam
  - Included water quality enhancements
  - Walking trail and other park amenity improvements

# Previous Park Road Park Pond Improvement Project (2009 – 2011)

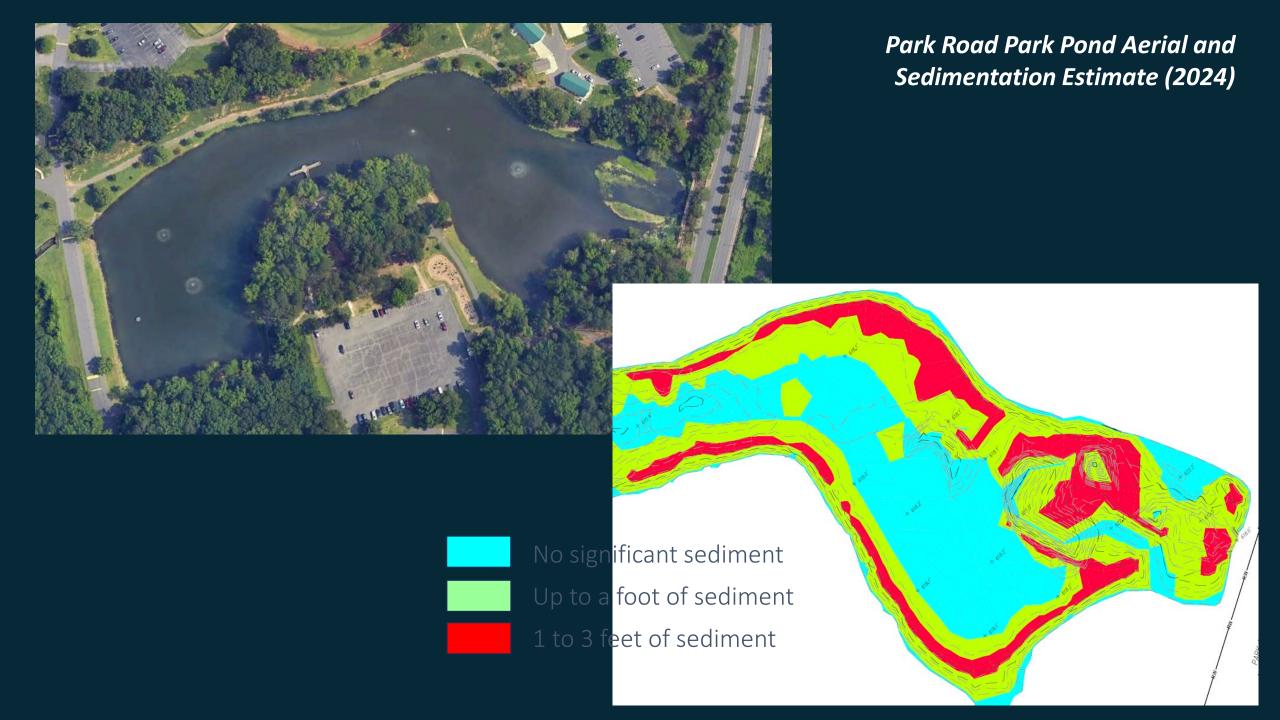

## Why We're Here

- Pond continues to experience sedimentation and "filling in" in upper section (visible "islands")
  - Sub-optimal pond depth/volumes
  - Exacerbates blue-green algae growth
  - Results in reduced pond function and healthy aquatic ecosystem

- 2022 study quantified sedimentation and water quality metrics
  - "Hyper-eutrophic" (excessive nutrients)
  - 14,500 cy (9 ac-ft) of sediment

### **Project Overview**

 Design, permitting, and construction for pond dredging and enhancements

 Dredging project is separate, but being performed in conjunction with Pavilion improvement project

**Pavilion Improvement Concept Plan** 

#### PARK ROAD PARK DREDGING PLAN

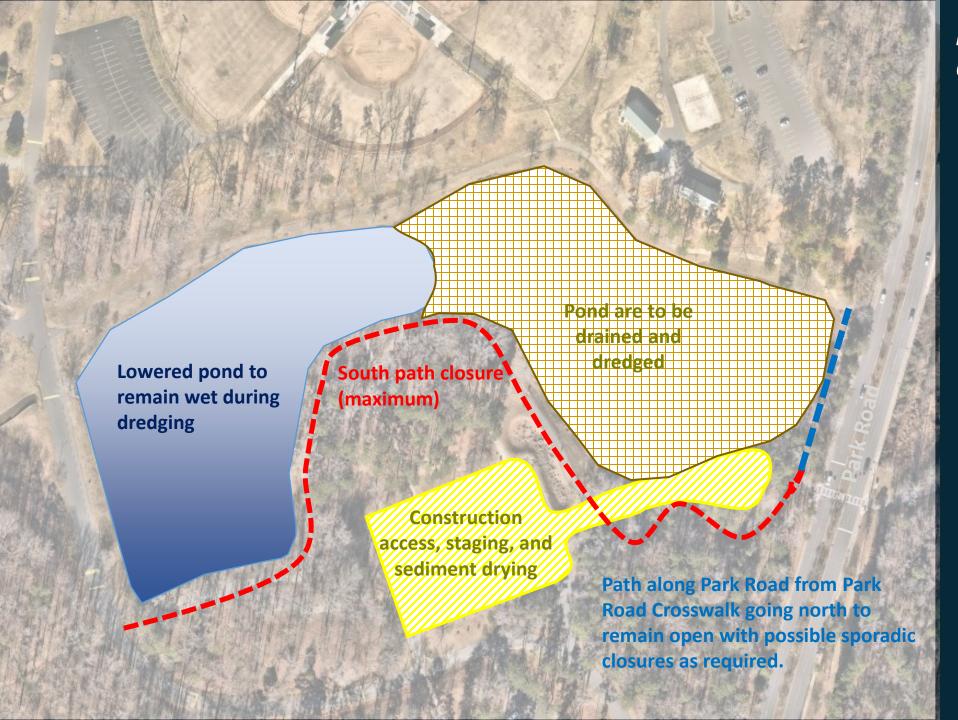

6220 PARK ROAD PARK CHARLOTTE, NC 28210

#### **Project Phases**

- Outreach/Coordination
- Data Collection
- Evaluation and Design
- Construction Documents
- Permitting and Agency Approvals
- Contractor Bidding
- Construction
- Clean-up and Close-Out

# Pond During Construction

#### Mechanical Dredging Examples

#### Hydraulic Dredging Examples

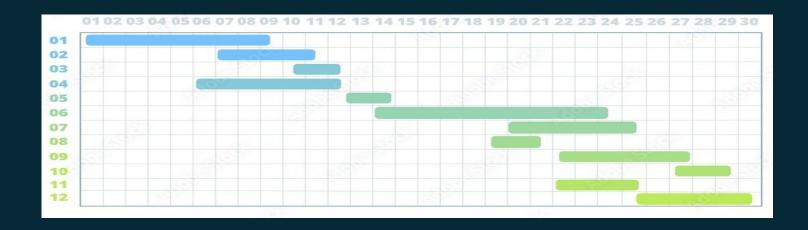

### Proposed Schedule

- March/April: Data Collection
- April August 2024: Evaluation/Design
- August September 2024: Construction Documents / Permitting
- September/October 2024: Bidding & Contract Award
- November 2024 to June 2025: Construction
  - Pavilion project expected completion in July

## What you can expect

#### **During Construction**

- Construction equipment in and out
- Partial trail and pond closure
- Periods of activity and periods of waiting
  - Material will need to dry out for hauling
- Potential odors

#### **Following Construction**

Healthier and more functional pond

### Thank You
